

# NETSCOPE Reporter & Alerter

NetScope Reporter & NetScope Alerter are the *first* network traffic analysis tools designed from the user's perspective that do not compromise functionality. Each user sees a view suited to their individual requirements.

NetScope Reporter & NetScope Alerter will show what is happening on your network, 24/7, in the form most suitable for you. The data is presented in a form that matches exactly what you need. In this way the CIO will see the overview needed to assist with planning while the Network Administrator will have the highly detailed views needed for trouble shooting.

## Take control

Detailed insight into the traffic and status of your network is vital for maintaining the performance of business critical systems and coping with changes in demand for network resources within the organisation.

Through powerful reporting and alerting features as well as showing the network health at a glance, NetScope Reporter and Alerter gives you the information to take control of your network. NetScope Reporter and Alerter detail the why, what, who and when of Network activity. Why is my network slow? What type of traffic is on my network? Who is accessing my network? When did an issue occur?

## Reporting

NetScope Reporter provides highly detailed information on immediate and historical traffic data, delivering administrators the power to analyse and plan for long term network future, allocate resources appropriately or simply examine current network activity.

Using powerful reporting features, users are able to quickly and simply output and distribute graphic reports on network activity via an intuitive web based interface. Reports can be based on predefined or user generated parameters and distributed to the relevant personnel as required. NetScope Reporter will also allow the user to easily drill down into reports to gain a finer view of the traffic.

NetScope Reporter analyses data stored within its database to generate graphical reports either automatically or on demand. Choose from numerous predefined reports or create your own based on user specified parameters such as devices and time periods.

## ★ Reporting key benefits

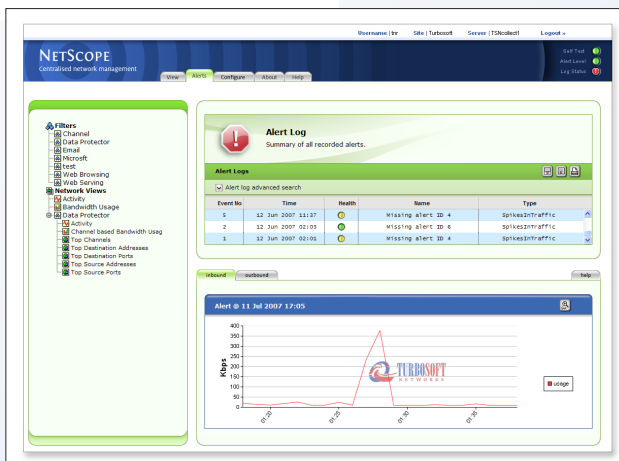

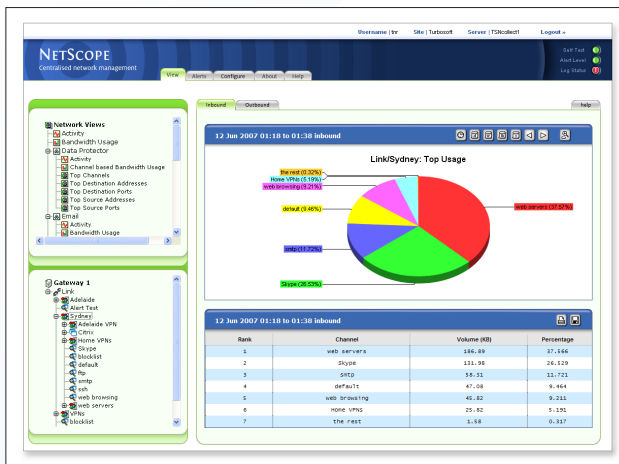

- Demystify network traffic by showing traffic broken up into the useful segments.
- Help secure your network by identifying unauthorised peer to peer traffic, Denial of Service attacks, trojans, malware or virus attacks.
- Determine network usage trends and plan for the changing demands on your network with full historical data access and traffic flow information.
- Visual presentation of the network health at a glance.
- Manage network traffic presentation in line with the needs of the individuals that will view the data, and in the form most relevant (line chart, pie, histogram, tabular etc.).

### Advanced alerting

NetScope Alerter's powerful alerting features keep watch over your network, notifying you of issues and events when they occur.

By flagging issues before your users do, NetScope Alerter assists in guaranteeing customer satisfaction and improving the user experience. Vital business applications and infrastructure are kept functioning as smoothly as possible.

Choose from a predefined list or create individual alerts tailored to your own requirements. Alerts criteria covers issues such as the addition of new users to the network, the appearance of new (perhaps unauthorised) traffic, bandwidth oversubscription, bandwidth availability above or below a critical point, traffic on specified ports or addresses, traffic spikes and so on.

### Alerting key benefits

- Choose from a predefined alert list or create tailored alerts.
- Configure alerts to be sent based on traffic condition as well as time.
- Identify problems well before your users do.
- Alerts can be set up to be sent via E-mail or SMS.
- Be alerted on new applications consuming bandwidth.
- Know about new users accessing your WAN.
- Be alerted to excess bandwidth usage and deal with it before its too late.

### About Turbosoft Networks

Turbosoft Networks is a part of Turbosoft Pty Ltd, a privately owned 100% Australian company with over 20 years experience as a leading manufacturer of enterprise wide connectivity and network performance solutions.

Today Turbosoft markets its products in more than 30 different countries with numerous offices, resellers and distributors spanning across all parts of the globe. Our customers include an enviable list of local & international clients from diverse range of market sectors.
